

Funding Support through OTEP for Environmental Programmes in the UK Overseas Territories

The Overseas Territories Environment Programme (OTEP) was established to enable the Governments of the UK and the Overseas Territories to meet their commitments under the Environment Charters. In 1999, the year of the White Paper, the Foreign and Commonwealth Office (FCO) made available an annual funding programme for environmental projects in the UKOTs. And in 2003, the British Government worked together with Territory Governments and non-governmental organisations to develop OTEP, a new ring-fenced fund which supports environmental projects in the UKOTs. OTEP is a joint initiative of the FCO and the Department for International Development (DFID) which aims to build on the success of earlier FCO-funded programmes. Bids may be submitted by Overseas Territories governments; NGOs; community-based organisations; individuals; educational institutions; private sector. Bids may also be submitted by UK-based organisations, NGOs and academic institutions if they have been developed in collaboration with partners in the Territories.

Selection criteria

The selection panel is made up of people who have knowledge of UKOT environmental matters. Key to their consideration of project proposals is the extent to which a project has the potential to help:

- ♦ implement the Environment Charter for the Territory, including the development of strategies and action plans where necessary;
- ♦ meet the Territory's obligations under those Multilateral Environmental Agreements extended to it, and prepare for possible future extensions;
- ♦ build environmental management capacity in the Territory; and
- ♦ raise awareness of environmental issues, promote participation by civil society in decisions affecting the environment, and support environmental education in the Territory.

Examples of projects approved in the first two rounds

- ♦ Monitoring and management projects for ecosystems (The Ascension Environment Information Operations Utility; the Ascension National Parks Management Plan; Cayman's Coastal Nutrient Monitoring Project; management projects for Anguilla's coastal areas, St Helena's central peaks, Nightingale Island; a general environmental management plan for the South Georgia and South Sandwich Islands)
- ♦ Conservation programmes for particular species (seabird restoration on Ascension; seabirds and turtles in St Helena; the spectacled petrel in Tristan da Cunha)
 - ♦ Projects to support eco-tourism (a botanical garden for Montserrat, a mangrove wetland interpretive centre for the BVI)
 - ♦ Environmental education (a conservation leaflet for the British Indian Ocean Territory)
 - ♦ Projects involving several UKOTs (planning for climate change in the Caribbean)

A female Green Turtle returns to the sea after laying; conservation has restored Ascension's population to the second largest in the Atlantic.

ASCENSION ISLAND ENVIRONMENT CHARTER

A PARTNERSHIP FOR CONSERVATION AND SUSTAINABLE USE OF ASCENSION'S ENVIRONMENTAL RESOURCES

It is a little-known fact that many of the United Kingdom's most significant biodiversity resources are not in the British Isles themselves. They are to be found in the UK Overseas Territories (UKOTs), former colonies and territories scattered around the world. Endemic species – those which occur in only one place in the world – are critically important to the planet's overall biodiversity, and the UKOTs have at least ten times as many endemic species as Britain itself. Because of its remote location, Ascension Island's unparalleled biodiversity resources include eleven species of breeding seabirds, including the endemic Ascension Frigatebird, vitally important green turtle nesting grounds and a terrestrial ecosystem which boasts literally dozens of endemics. Under international treaties, it is the joint responsibility of the UK Government and the Government of Ascension to care for this precious biodiversity.

The world's only breeding site for the Ascension Frigatebird is on Boatswainbird Island; work is in progress to restore breeding seabirds to Ascension itself.

In 1999 the UK Government issued the Overseas Territories White Paper 'Partnership for Progress and Prosperity.' This recognised that responsibility for environmental issues in the Overseas Territories rested with the local governments, but that the UK Government had responsibility to support these local efforts. This concept was embodied in the Environment Charters; Ascension's Charter was signed by the UK Minister for the Overseas Territories and by the then Administrator Geoffrey Fairhurst on 26 September 2001 (see centre pages of this brochure). The Charter includes guiding principles and a set of mutual commitments by the UK Government and the Government of Ascension Island in respect of integrating

environmental conservation into all sectors of policy planning and implementation. Ascension's first commitment is to develop a detailed strategy for action to implement the principles of the Charter, and the first commitment of the UK Government is to help build capacity to support integrated environmental management. Ascension's capacity to develop such a strategy has grown greatly since the Island acquired its first elected government in 2001, and established a Conservation Centre. This forward-looking group has adopted a Protected Areas Ordinance, created Ascension's first national park, Green Mountain, and approved a suite of other proposed protected areas, all of which helps Ascension meet its obligations under the Charter.

Asplenium ascensionis, one of several endemic ferns which constituted Ascension's original mountain-peak cloud forest.

Environment Charter

ASCENSION ISLAND

Guiding Principles

For the UK Government, for the government of Ascension Island and for the people of Ascension Island

- 1 To recognise that all people need a healthy environment for their well-being and livelihoods and that all can help to conserve and sustain it.
- 2 To use our natural resources wisely, being fair to present and future generations.
- 3 To identify environmental opportunities, costs and risks in all policies and strategies.
- 4 To seek expert advice and consult openly with interested parties on decisions affecting the environment.
- 5 To aim for solutions which benefit both the environment and development.
- 6 To contribute towards the protection and improvement of the global environment.
- 7 To safeguard and restore native species, habitats and landscape features, and control or eradicate invasive species.
- 8 To encourage activities and technologies that benefit the environment.
- 9 To control pollution, with the polluter paying for the prevention or remedies.
- 10 To study and celebrate our environmental heritage as a treasure to share with our children.

Commitments

The government of the UK will:

- 1 Help build capacity to support and implement integrated environmental management which is consistent with Ascension Island's own plans for sustainable development.
- 2 Assist Ascension Island in initiating, reviewing and updating environmental legislation.
- 3 Facilitate the extension of the UK's ratification of Multilateral Environmental Agreements of benefit to Ascension Island and which Ascension Island has the capacity to implement.
- 4 Keep Ascension Island informed regarding new developments in relevant Multilateral Environmental Agreements and invite Ascension Island to participate where appropriate in the UK's delegation to international environmental negotiations and conferences.
- 5 Help Ascension Island to ensure it has the legislation, institutional capacity and mechanisms it needs to meet international obligations.
- 6 Promote better cooperation and the sharing of experience between Ascension Island, other Overseas Territories and small island states and communities which face similar environmental problems.
- 7 Use the UK, regional and local expertise to give advice and improve knowledge of technical and scientific issues. This includes regular consultation with interested non-governmental organisations and networks.
- 8 Use the existing Environment Fund for the Overseas Territories, and promote access to other sources of public funding, for projects of lasting benefit to Ascension Island's environment.
- 9 Help Ascension Island identify further funding partners for environmental projects such as donors, the private sector or non-governmental organisations.
- 10 Recognise the diversity of the challenges facing the Overseas Territories in very different socio-economic and geographical situations.
- 11 Abide by the principles set out in the Rio Declaration on Environment and Development and work towards meeting International Development Targets on the environment.

The government of Ascension Island will:

- 1 Bring together government departments, representatives of local industry and commerce, environment and heritage organisations, the Governor's office, individual environmental champions and other community representatives in a forum to formulate a detailed strategy for action.
- 2 Ensure the protection and restoration of key habitats, species and landscape features through legislation and appropriate management structures and mechanisms, including a protected areas policy, and attempt the control and eradication of invasive species.
- 3 Ensure that environmental considerations are integrated within social and economic planning processes, promote sustainable patterns of production and consumption within the Territory.
- 4 Ensure that environmental impact assessments are undertaken before approving major projects and while developing our growth management strategy.
- 5 Commit to open and consultative decision-making on developments and plans which may affect the environment; ensure that environmental impact assessments include consultation with stakeholders.
- 6 Implement effectively Multilateral Environmental Agreements already extended to Ascension Island and work towards the extension of other relevant agreements.
- 7 Review the range, quality and availability of baseline data for natural resources and biodiversity.
- 8 Ensure that legislation and policies reflect the principle that the polluter should pay for prevention or remedies; establish effective monitoring and enforcement mechanisms.
- 9 Encourage teaching within schools to promote the value of our local environment (natural and built) and to explain its role within the regional and global environment.
- 10 Promote publications that spread public awareness of the special features of the environment in Ascension Island; promote within Ascension Island the guiding principles set out above.
- 11 Abide by the principles set out in the Rio Declaration on Environment and Development and work towards meeting International Development Targets on the environment.
